COBALT IN OCTOBER 1993

U.S. cobalt consumption in October decreased 4% from consumption in September, according to the U.S. Bureau of Mines (USBM). However, cobalt consumption for the first 10 months of 1993 was essentially unchanged from consumption during the same period in 1992. Domestic data on U.S. cobalt consumption and stocks are developed by the USBM from voluntary surveys of U.S. operations. The data in tables 1 through 3 contain estimates to account for nonrespondents and are subject to revision. Approximately 4,446 metric tons of cobalt metal and cobalt contained in chemicals were imported during January through September, as compared with 4,370 metric tons imported during the first 9 months of 1992. Exports of cobalt-containing materials during January through September included 574 metric tons of unwrought cobalt and cobalt contained in chemicals, as compared with 1,226 metric tons exported during the same period in 1992. Trade data for October will be available in a subsequent issue.

Recent USBM Publication.--The USBM recently issued two special reports that include sections on cobalt. "Chemical Industry Applications of Industrial Minerals and Metals" is a compilation of brief reviews for nearly 50 commodities. Each review gives a general background on the commodity, followed by a discussion of how it is used by the chemical industry, and an outlook section. The second report, "Recycled Metals in the United States," provides salient facts, scrap sources, recovery methods, scrap prices and markets, and an outlook for nearly 25 metals. Single copies of these reports are available free of charge as supplies last. For further information, please contact Kim B. Shedd (U.S. Bureau of Mines, Mail Stop 5208, 810 7th St., NW, Washington, DC 20241) or the U.S. Bureau of Mines Branch of Production and Distribution, Cochran's Mill Road, P.O. Box 18070, Pittsburgh, PA 15236.

USBM Research.--The USBM has successfully demonstrated an upgrading process for National Defense Stockpile (NDS) cobalt. Researchers at the USBM Salt Lake City, UT, Research Center conducted three 120-hour test campaigns with USBM-developed cobalt upgrading technology. The objective was to economically upgrade NDS cobalt to meet the most stringent Department of Defense (DOD) specification, P13-R6 grade A. A key feature of the upgrade process is a novel double membrane electrolytic cell (DMEC). The upgrade process involves three principal steps: 1) electrochemical dissolution of cobalt in DMEC anode

Prepared in the Branch of Metals and the Branch of Data Collection and Coordination, December 17, 1993.

BLM LIBRARY

compartments, 2) anolyte purification by hydrometallurgical means, and 3) deposition of high-purity cobalt cathodes from purified anolyte in DMEC cathode compartments. The DMEC cathode assayed greater than 99.9% cobalt and quantities of 29 impurity elements were below the maximum levels allowed in P13-R6 grade A cobalt. For further information please contact: Lorin Redden, Salt Lake City Research Center, (801) 584-4100.

Update.--On December 9, the DLA awarded 181,955 pounds of cobalt at \$10.608 per pound to Minor Metals, Inc., of Fort Lee, NJ,--46,703 pounds under category A and 135,252 pounds under category B. The next sale of cobalt rondelles is scheduled for December 22, 1993, and the next sale of cobalt granules is scheduled for January 12, 1993.

Price update, dollars per pound of electrolytic cobalt (Source--Platt's Metals Week):
